

26,593 Coincidences!

There have been a handful of Coroner's Inquests in the UK where a person's cause of death has been officially recorded as due to Covid-19 vaccination. For example, the case of Mr Jack Hurn who died in June 2021 from blood clots on the brain, 12 days after receiving the AstraZeneca Covid jab.

However, is there a much more widespread and sinister issue of Covid-19 vaccine associated deaths? An inconvenient complication that will never be mentioned by the friendly nurses on "Brian the Bus", a repurposed mobile unit which tours the Isle of Man making it as easy as possible for local residents to be jabbed and certainly not even whispered by the smiley faces in the Chester Street Vaccine Hub where bright murals playfully adorn the walls welcoming 5 year old vaccine recipients.

In our Latest News item dated 6th July 2022, we referred to 1.7 million reported incidents of harm arising from Covid vaccination across Europe. Some of those reported incidents included fatal outcomes.

In the UK, the **YELLOW CARD** reporting system recorded as at 25th July 2022 a total of 2,213 (1,294 AstraZeneca, 808 Pfizer, 62 Moderna and 49 unspecified brand) suspected adverse reactions to Covid vaccines in which the patient died shortly after vaccination.

In the European Union, the European Medicines Agency (EMA), the body which authorises and monitors Covid-19 vaccines, recorded that as at 14th July 2022 the total number of cases of suspected Covid-19 vaccine side effects reported as a fatal outcome was 10,992 (Pfizer 8,032, AstraZeneca 1,552, Moderna 1,086 and Janssen 332).

In the USA, the Centres for Disease Control and Prevention (CDC) provides Covid-19 vaccine safety data through its Vaccine Adverse Event Reporting System (VAERS).

As at 17th June 2022, 13,388 deaths in the USA shortly after Covid vaccination were recorded by VAERS.

Based on the above official Government statistics, the combined total number of deaths shortly after Covid-19 vaccination in the UK, EU and the USA as at 31st July 2022 is a truly horrifying **26,593**.

This total clearly does not include Africa, Central or South America nor Asia or China and obviously this figure is only the total number of fatal outcomes as reported to the authorities. Many, many cases are very likely to have gone unreported.

If, for example, a new sleeping pill was authorised and introduced on to the market and 593 people, let alone 26,593 people, died a short time after taking it this would undoubtedly be considered to be a major international pharmaceutical scandal. Think Thalidomide or think deja vu and remember the so called Swine flu pandemic in 1976. USA Democratic President Gerald Ford ordered the hasty mass vaccination of every man, woman and child in the US and granted pharmaceutical companies an indemnity against civil legal action as they rushed to develop a vaccine. However, the

vaccination rollout was suspended by the CDC after only a few months following 32 deaths linked to Guillian-Barre Syndrome being reported in persons receiving the Swine flu vaccine.

The parallels 44 years later are remarkable although this time there has not been any recall or suspension of the vaccines. On the contrary, the global Covid-19 vaccination rollout carries on remorselessly.

Governments are keen to stress that the fact that someone who has died after receiving Covid-19 vaccination does not necessarily mean that the death was *caused* by the vaccine.

You could be forgiven for thinking this approach is a patently inconsistent. Because on the one hand the UK Government records deaths from Covid-19 as deaths within 28 days of a positive Covid test result hence the headline statistic that there have been 160,485 Covid-19 deaths as at 31st July 2022 in the UK (despite the main cause of death often being from a pre-existing condition or something other than Covid-19).

Whereas on the other hand, if a person dies “within a short time” of receiving a Covid vaccine this is not taken as a vaccine related death.

In other words the Government is eager to highlight the supposed relationship between the Covid-19 virus and death but extremely reluctant to acknowledge any direct link between Covid vaccination and death. According to the authorities, death could be just a *coincidence*.

As a matter of common sense, are these untimely **26,593 deaths** really all just coincidental?
